

Consistently sample active oil (up to VG 220) from gearboxes and reservoirs. Avoid problems caused by sedimentation or settled oil.

Uses a compact reusable thread-on probe and disposable tubing to avoid cross contamination.

Installs easily into drain, fill or sampling pipe ports.

Flexible steel 3/16 SAE J527 tubing provides full flow with less purge time.

Swivel options(-S) available for bent tubes in confined locations.

Stainless steel valves (-R), adapters and tubes (-TR) are available for extra corrosion resistance.
